Enhancements to 'Student List' page
Enhancements to 'Meeting Pattern' page
New 'Classses' page
Additional columns for ad hoc users
Moving a column to be a table prompt
Re-arrange columns in a report
More Search Options

ENHANCEMENTS TO 'STUDENT LIST' PAGE
The 'Student List' page has been expanded to include columns showing the student’s permanent address, and preferred email address. Additionally, Degree Checkout Status has been added as a new filter allowing you to further refine your results.

ENHANCEMENTS TO 'MEETING PATTERN' PAGE
The 'Schedule of Classes' report within the 'Meeting Pattern' page has been expanded to include the Enrollment Headcount and Waitlist Headcount columns. Furthermore, new filter options for Subject and Subject Code have been added.

NEW 'CLASSES' PAGE
A new 'Classes' page has been added to the Student Dashboard. The Classes page allows you to filter on a variety of attributes to get a list of associated classes and students, as well as the class locations.

ADDITIONAL COLUMNS FOR AD HOC USERS
Individuals that have access to the UDW+ Student ad hoc subject areas will see new column options for Combined Classes (including Combined Class Enrollment Capacity, Waitlist Capacity and Waitlist Headcount). To see a complete list of all new columns available for ad hoc reporting, view the Release Notes.

MOVING A COLUMN TO BE A TABLE PROMPT
If you need to filter your results table to a specific value in a column, you can make that selected column a ‘Table Prompt’. Right-click on the selected column heading, and select ‘Move Column > To Prompts’. This will move the selected column to the Prompts area allowing you to select a filter based on the options in the newly created prompt. If you need to put the column back into the table, right-click on the prompt and select ‘Move Column > To Columns’. This will put the column back into the results table. You may then re-arrange the columns in the order needed.

RE-ARRANGE COLUMNS IN A REPORT
You may re-arrange columns in a report by simply grabbing the column header by its handle bar (the mouse icon will turn into a cross-hatch) dragging the column to the desired column position, and dropping it into place. The data in the report will re-pivot based on the new column order.

MORE SEARCH OPTIONS
The Student Dashboard contains a variety of filtering options. By default, the pages display the most commonly used filters such as Term, Student Academic Group, and Plan Type. However, you can further refine your results by checking-off ‘More Search Options’ and setting additional filters such as Career, Program and Plan. Don’t forget to click “Apply” to refresh your results.
