Creating a Child Page

To create a child page, you require 'Create Pages' permission which is assigned by a space administrator from the Space Administration screens. See Space permissions or contact a space administrator for more information.

Confluence allows you to create child pages in three different ways:

1. View an existing page. Go to the ‘Add’ menu and select ‘Page’. By default, Confluence adds the new page as a child of the first.

2. Go to the ‘Add’ menu and select ‘Page’ from anywhere else in Confluence, then move the page to its required ‘Location’ while still in edit mode — refer to the instructions on moving a page.

3. Click the ‘Add Child Page’ link that is displayed when you choose to ‘show’ children of a page.
   Note that this option is available only when the page already has children.
