Changing Parent of a Page

In Confluence, you can organise pages into a hierarchy of parent and child pages. Pages in such a hierarchy are called a page family.

Page families are a simple but effective way of categorising content. Confluence makes navigation of your site easier by providing links forward and backwards through the page hierarchy.

A parent page is at the topmost level of that hierarchy. Subpages are called child pages or children.

To change the parent of a page, you can:

- Move the page to a new space, if that's what you want. You do this while editing a page.
- Move the page to a new position in the space's tree view. You do this while editing a page or while viewing the space's Tree view.
