Running jobs on the Prince Cluster

Accessing the Prince Cluster
- From Windows workstation
- From Mac workstation

Software and Environment Module
- Job script and resource request
  - Introduction to job scheduling
  - Submitting jobs with sbatch
  - Requesting resources
  - Using computing nodes interactively

Monitoring batch jobs
- Monitoring batch jobs - squeue
What is running and where? slurmtop

Canceling your jobs
Compiling your own software
Putting all pieces together
An Amber example
A R example

Summary

To kill a running job, or remove a queued job from the queue, use `scancel`

```bash
$ scancel jobid
```

To cancel ALL of your jobs:

```bash
$ scancel -u NetID
```
