Copy of Doctoral Student Employment

Table of Contents:

1. Purpose
2. Fact Amounts
3. Examples
4. User Notes
5. Additional Reports

1. Purpose – The Doctoral Student Employment page displays the employment status and funding of doctoral students who are enrolled or maintaining matriculation. It includes a summary that categorizes these students as employed or unemployed and provides detail on their funding sources. Because employment data is drawn from PeopleSync, this page begins with data for Fall 2014. Previous data is either unavailable (prior to FY2013) or incomplete. Employment data from PeopleSync is combined with enrollment data from SIS to create this analysis. This page references the Fall semester. The data on this page is updated weekly on Sunday evenings.

2. Fact Amounts –

3. Examples –

4. User Notes – Please note that the top row of this page categorizes all new doctoral students that are employed or unemployed. The second row summarizes the total funding that supports their employment. As always in this page, funding is shown in thousands of dollars. The table at the bottom of the page shows the count of student employment sources associated with each funding category. Students with funding from more than one source and more than one row per position within a fund type or in more than one fund type are counted more than once. For example, a student with two positions and three rows of funding in one source would be counted three times. A student with two positions with one row of funding per position would be counted once per funding source. A student with two positions where two rows of funding are in one position and one row of funding is in another position would be counted twice in one funding source and once in another funding source. Additionally, doctoral students who are only receiving stipends are not employees of NYU and are counted as not employed.

Please note the following definitions for terms used in the Doctoral Student Employment tab:

- **Academic Year**: An academic year consists of a Fall, Winter, Spring, and Summer term over two calendar years. The fall semester will refer to the calendar year in which the Fall semester occurs. For example, Fall 2012 refers to the fall semester that occurred in calendar year 2012.
- **Doctoral Students**: Those who are enrolled or maintaining matriculation. Students are assigned to departments by their primary academic plan. First-year students are those identified as “new doctoral” in SIS. The doctoral category excludes MD, DDS, and JD students.
- **Employed Students**: Those who have a position with compensation or activity-based pay during the term selected.
- **Employment Funding**: These amounts are determined by allocating the student's planned compensation to terms. To measure funding by term, annualized amounts are allocated as follows (one student may have more than one allocation):
  - **Term Funding = Total Planned Compensation * Term Funding Days / 365 (or 366 for leap years)**
- **Term Funding Days**: The number of days that the activity overlaps with the term, identified by the beginning and end dates of the standardized academic term.
- **Technical Note**: The calendar year includes time period that are not included in any academic term. Employment funding in those periods is allocated to the following term as follows:
  - Days between Fall and Winter: allocated to Winter
  - Days between Winter and Spring: allocated to Spring
  - Days between Spring and Summer: allocated to Summer
  - Days between Summer and Fall: allocated to Fall
- **Funding Source**: Employment funding is shown in three categories based on the fund from which it is drawn:
  - Federal = Fund 25
  - Other External Funding = Fund 24, 72, 73, and 76
  - All Other Funds = All other funds unspecified funds
