Changing the Title of a Link

This page tells you how to change the text that is displayed as a link, using the Wiki Markup editor. Sometimes you may need to change the default text for a link if the text is not particularly informative or attractive, and especially if you are including the links in the middle of your own text.

To change the title of a link,

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>[the current release notes</td>
<td>Sample Release Notes]</td>
</tr>
</tbody>
</table>

Where:
- ‘the current release notes’ is your new label.
- ‘Sample Release Notes’ is the name of the page you want to link to.

Example: Changing the title of a blog post

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>[an article on the subject</td>
<td>2007/06/25/Sample News]</td>
</tr>
</tbody>
</table>

Where:
- ‘an article on the subject’ is how you want to refer to the blog post.
- ‘2005/08/26’ is the date the blog post was published.
- ‘Sample News’ is the actual title of the blog post.

Example: Combining inter-space links and labelled links

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
</table>

Where:
- ‘User Guide for a previous version of Confluence’ is your label.
- ‘CONF27’ is the space key of the space the page you want to link to is located.
- ‘Confluence 2.7 User Guide’ is the name of the page in that space.
