An excellent source of yeast protocols can be found here: http://cshprotocols.cshlp.org/cgi/collection/yeast

A primer on using yeast by Fred Sherman is here: Sherman_Starting_with_yeast.pdf.

A more general molecular biology protocols are here: http://cshprotocols.cshlp.org/site/misc/subject.xhtml

Media & Recipes

- Common Yeast Media (YPD, SC, and the like)
- 1000x Metals
- 1000x Vitamins
- 10L of 10x Nitrogen limited salts
- 1L of 10X Phosphate Limitation Salts
- 1L of 10x Carbon Limitation Salts
- 100mM Nitrogen Stocks
- Glucose Limiting Media
- Nitrogen Limiting Media
- Phosphate Limiting Media
- Leucine and Phosphate Limiting Media
- Leucine and Uracil Limiting Media
- Nitrogen Agarose Plates
- Variable Nitrogen Source Limitation Carboy
- Denhardts Media
- D-His/D-Ser Plates
- Soft Agarose
- YPG(YEPG OR YEP-GLYVEROL)

Growth and Growth Assays

- Coulter Counter
- Colony Counter
- Sixfors Chemostat
- Chemostat Protocols
- SYTO9 & PI FACS Viability Assay
- FACs-based analysis for competition experiments
- FUN-1 Metabolic Activity Assay
- Benomyl Assay
- Competitions in the ministats

Yeast Cytometry

Fixing

- Ethanol fix
- Filter & PFA fix, lyticase digest, etOH permabilization
• Old-school (field standard) fix, digest, permeabilization for immuno or FISH applications

**Probing/Staining**

• DNA content flow cytometry with Sytox Green  
• Amine/sulfhydryl staining (protein content proxy) with FITC  
• polyA staining using singly-labeled FISH  
• mRNA single molecule FISH with Stellaris-style probes  
• FISH for FACS applications, using Quantigene probes (BFF)  
• RNA content flow cytometry with RNAsytoSelect

**RNA (and Expression Analysis)**

*Extractions, purifications, and enrichments:*

• Yeast RNA Extraction (growing)  
• RNA extraction from yeast, a different version (2016)  
• RNA extraction from stationary phase yeast (thicker cell wall)  
• Proteinase K-mediated extraction of RNA from yeast  
• DNase treatment of RNA  
• polyA selection  
• Ribominus selection  
• ecoli RNA extraction

**cDNA for expression analysis:**

• Making cDNA for Transcriptome Analysis - primarily microarray  
• cDNA synthesis with M-Mulv RT - primarily for qPCR  
• RT qPCR (deprecated)  
• RT qPCR workflow

**RNAseq**

• RNA-Seq (directional) rnaseq RNAseq  
• Nextera Based RNASeq using ds cDNA from polyDT primers  
• Nextera Based RNASeq using ds cDNA from Random Hexamers

**4tU labeling related methods**

• Making spike-ins, linearizing and in-vitro transcription  
• HPDP Biotinylation of 4tU labeled RNA  
• Streptavidin Pull-down of Biotinylated-HPDP-4tU RNA  
• Dot Blot Assay

**Analysis**

• Separation of RNA by electrophoresis or Denaturing gel (formaldehyde) or Non-denaturing RNA gel  
• Transfer of Denatured RNA to positively charged nylon membrane  
• Preparation of an Exemplary RNAlater- RNA Preservation Medium

**DNA**

• Quick yeast gDNA extraction for PCR-based applications  
• High Throughput DNA extraction with PureLink™Pro 96  
• Hoffman Winston DNA Prep  
• Southern Blot Analysis  
• Bar-seq Barseq (high-throughput analysis of competing mutants, see Robinson, Chen, Storey, and Gresham 2014)  
• low-input barseq, aka SoBaSeq for amplicon-sequencing of dead sorted cells  
• DNA fragmentation  
• Ethanol precipitation/concentration of DNA

**DNAseq**

• DNA Library Preparation Using Nextera tagmentation
DNA Microarrays - for cDNA from RNA, see above section
