Web-Widget Macro

The **Web-Widget** macro is just another name for the **Widget macro**.

Confluence supports **web-widget** as an alias for **widget**. Your *System Administrator* can enable or disable one or both these macro names. The alias is useful for Confluence sites which use Adaptavist's *Community Bubbles* plugin, to avoid conflict with the 'widget' macro supplied by that plugin.

If the **web-widget** alias is enabled on your Confluence site, you can use **web-widget** instead of **widget** in all the examples given in the page about the **Widget macro**.
