Web-Widget Macro

The Web-Widget macro is just another name for the Widget macro.

Confluence supports web-widget as an alias for widget. Your System Administrator can enable or disable one or both these macro names. The alias is useful for Confluence sites which use Adaptavist's Community Bubbles plugin, to avoid conflict with the 'widget' macro supplied by that plugin.

If the web-widget alias is enabled on your Confluence site, you can use web-widget instead of widget in all the examples given in the page about the Widget macro.
