Linking to Personal Spaces and User Profiles

This page tells you how to add a link to a user's personal space or user profile from within another Confluence page, using the Wiki Markup editor.

You can link to a user's personal space (or user profile) easily if you know their username.

To link to a user's personal space,

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="-username" alt="Unknown macro: (nomarkup)" /></td>
<td>![~username]</td>
</tr>
</tbody>
</table>

If the user does not have a personal space, then the link will go to their user profile.
