Changing the Title of a Link

This page tells you how to change the text that is displayed as a link, using the Wiki Markup editor. Sometimes you may need to change the default text for a link if the text is not particularly informative or attractive, and especially if you are including the links in the middle of your own text.

To change the title of a link,

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>[the current release notes</td>
<td>Sample Release Notes]</td>
</tr>
</tbody>
</table>

Where:

‘the current release notes’ is your new label.
‘Sample Release Notes’ is the name of the page you want to link to.

Example: Changing the title of a blog post

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>[an article on the subject</td>
<td>2007/06/25/Sample News]</td>
</tr>
</tbody>
</table>

Where:

‘an article on the subject’ is how you want to refer to the blog post.
‘2005/08/26’ is the date the blog post was published.
‘Sample News’ is the actual title of the blog post.

Example: Combining inter-space links and labelled links

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
</table>

Where:

‘User Guide for a previous version of Confluence’ is your label.
‘CONF27’ is the space key of the space the page you want to link to is located.
‘Confluence 2.7 User Guide’ is the name of the page in that space.
