The Content by User macro generates a tabulated list of all current content items created by a specified Confluence user throughout a Confluence installation. These items include any existing page, comment or space created by a specified user. The table generated is divided into three columns and each item listed within it is hyperlinked directly to its corresponding page, page’s comment or space’s dashboard.

Please note the following points:
- Each item in the table is represented by the name of its page or space.
- Each comment item contains two hyperlinked components separated by a greater-than sign (>). The first hyperlink leads to the page itself while the second leads directly to the comment further down the page. The second hyperlink is represented by the name of the page, preceded by `Re:`.

Usage with the Macro Browser

To insert the Content by User macro into a page using the Macro Browser,

1. Open the Confluence page or blog post that you want to edit, then click the 'Edit' button.
2. Click the Macro Browser icon on the toolbar. The macro browser window will open.
3. Scroll through the list of macros to find the one you want. Alternatively, start typing the macro name into the search box at the top right of the macro browser. Macros with a matching name will appear in the main pane.
4. Click the desired macro.
5. Set the macro parameters to your requirements. If desired, you can preview these changes by clicking 'Refresh'.
6. Click 'Insert' to add the macro onto the page.

You can also insert macros via autocomplete. For more information, see Using Autocomplete in the Rich Text Editor.

Once you’ve found the Content by User macro, click 'insert' to add it to your page.

Usage with the Wiki Markup Editor

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>Segment of what you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>{content-by-user:ggaskell}</td>
<td></td>
</tr>
</tbody>
</table>

Parameters

Parameters are options that you can include in Confluence macros to control the content or format of the macro output. The table below lists relevant parameters for this macro.

Parameter names are different in the macro browser and in wiki markup. Below we show the macro browser parameter names in **bold** text, and the equivalent wiki markup parameters in *(bracketed)* text. If we do not show any parameter name for the wiki markup, then you should leave out the parameter name and simply include the parameter value as the first parameter, immediately after the colon (:).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required in Wiki Markup?</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>yes</td>
<td>none</td>
<td>Lists all current content items created by this Confluence user (referenced in this macro by their username).</td>
</tr>
</tbody>
</table>
