This recipe will make 1L of glucose limiting media at a concentration of 0.1%

**Autoclave:**

100mL of 10X carbon salts (final = 1x)

896mL of dH₂O

1mL of 1000x metals (final = 1x)

1mL of 1000x vitamins (final = 1x)

**Then add using sterile technique:**

varies:

2.0mL 40% glucose (final = 0.08%) *Benjy used these levels for carbon limitation experiments

2.5mL 40% glucose (final = 0.1%) *Original protocol from DG
