Using Jupyterhub

What is Jupyterhub

JupyterHub is the best way to serve Jupyter notebook for multiple users. It can be used in a classes of students, a corporate data science group or scientific research group. It is a multi-user Hub that spawns, manages, and proxies multiple instances of the single-user Jupyter notebook server.

How do I use Jupyterhub

Jupyterhub is configured as a server program and users can use the endpoints (Jupyter notebook) to write code and integrate into the system.

Jupyterhub on HPC clusters

FAQs

1. Issue: Unable to start a jupyter, but login is successful. With the following output
Solution:
User needs to be added to the slurm reservation. Please send e-mail to hpc@nyu.edu requesting access.
