Submiting jobs with sbatch
Requesting resources
The program `slurmtop`, available on the login nodes, shows which jobs are currently running on which nodes and cores of a cluster. Jobs belonging to a single user can be highlighted by launching `slurmtop` with the `-u` switch:

```
slurmtop -u <NetID>
```

(of course, replace `<NetID>` with your NYU NetID). Or, you can use the alias “me”:

```
slurmtop -u me
```

When you start `slurmtop` you see something like the annotated screenshot below. You might need to resize your terminal to make it all fit:
What hardware is available?

You can use slurmtop to see which nodes are busy and which are free. Knowing what resources are available on a given node can help in estimating how busy is that part of the cluster that your job needs.

Node types we have, and where they appear in slurmtop, are:

---

**Exercise**

Start slurmtop and find your interactive session.

You’ll probably need to use `slurmtop -u me` to identify your job amongst all the colors.

You’ll probably also need to increase the size of your terminal window and decrease the font size so it all fits!
