

# Working with Text Effects

Use the markup shown in the examples below to format the text in your pages.

What you need to type	What you will get
<code>*strong*</code>	<b>strong</b>
<code>*bold text*</code>	<b>bold text</b>
<code>_emphasis_</code>	<i>emphasis</i>
<code>_italics_</code>	<i>italics</i> <i>Hint:</i> To italicise parts of a word, add braces (curly brackets) around the underscore. For example, <code>Thing { _ }x_</code> gives you this: Thing <i>x</i>
<code>??citation??</code>	<i>citation</i>
<code>-deleted-</code>	<del>deleted</del>
<code>+inserted+</code>	<ins>inserted</ins>
<code>^superscript^</code>	superscript <i>Hint:</i> There are two ways to make superscripts work in wiki markup, when used directly after another word or character: <ul style="list-style-type: none"><li>• Add a space before the superscript. For example, <code>kg/m ^3^</code> gives you this: kg/m <sup>3</sup></li><li>• Add braces (curly brackets) around the superscript markup. For example, <code>kg/m{^}3^</code> gives you this: kg/m<sup>3</sup></li></ul>
<code>~subscript~</code>	subscript
<code>{{monospaced}}</code>	monospaced
<code>bq. Here's how you make text in a paragraph into a block quotation</code>	<div style="border-left: 1px solid gray; padding-left: 10px;"><i>Here's how you make text in a paragraph into a block quotation</i></div>
<div style="border: 1px solid gray; border-radius: 10px; padding: 5px; display: inline-block;">Unknown macro: {nomarkup}</div> <code>look ma, red text!</code>	<b>look ma, red text!</b>
