Noformat Macro

The Noformat Macro displays a block of text in monospace font with no other formatting.

On this page:

- Usage with the Macro Browser
- Usage with the Wiki Markup Editor
- Parameters
- Example

Usage with the Macro Browser

To insert the noformat macro into a page using the Macro Browser,

1. Open the Confluence page or blog post that you want to edit, then click the ‘Edit’ button.
2. Click the Macro Browser icon on the toolbar. The macro browser window will open.
3. Scroll through the list of macros to find the one you want. Alternatively, start typing the macro name into the search box at the top right of the macro browser. Macros with a matching name will appear in the main pane.
4. Click the desired macro.
5. Set the macro parameters to your requirements. If desired, you can preview these changes by clicking ‘Refresh’.
6. Click ‘Insert’ to add the macro onto the page.

You can also insert macros via autocomplete. For more information, see Using Autocomplete in the Rich Text Editor.

Once you’ve found the noformat macro, click ‘Insert’ to add it to your page.

Usage with the Wiki Markup Editor

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>noformat</code></td>
<td><code>I do not want this text formatted!</code></td>
</tr>
</tbody>
</table>

Parameters

Parameters are options that you can include in Confluence macros to control the content or format of the macro output. The table below lists relevant parameters for this macro.

Parameter names are different in the macro browser and in wiki markup. Below we show the macro browser parameter names in **bold** text, and the equivalent wiki markup parameters in `[bracketed]` text. If we do not show any parameter name for the wiki markup, then you should leave out the parameter name and simply include the parameter value as the first parameter, immediately after the colon (`:`).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Body Text</strong></td>
<td></td>
<td>Affects text between the noformat tags.</td>
</tr>
<tr>
<td><strong>No Panel</strong></td>
<td>False</td>
<td>Removes the bordering panel.</td>
</tr>
</tbody>
</table>

Example

Remove the panel around the text

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>noformat:nopanel=true</code></td>
<td><code>I do not want this text formatted!</code></td>
</tr>
</tbody>
</table>

Format the panel

All of the optional parameters for the Panel macro are also valid for the Noformat macro.
