Applying a Theme to a Space

Themes allow you to personalise the 'look and feel' of Confluence. You can apply a theme to your entire Confluence site and to individual spaces. Choose a specific theme if you want to add new functionality or significantly alter the appearance of Confluence.

Confluence comes with a selection of themes. In addition, a site administrator can install new themes as plugins via the Confluence Administration Console. Provided that the theme is installed into your Confluence site, any space administrator can apply a theme to a space.

By default when you create a new space, the space will have the Confluence default theme.

To apply a theme to a space:

1. Go to the 'Space Admin' tab of the Browse Space view. To do this:
   - Go to a page in the space, open the 'Browse' menu and select 'Space Admin'. 'Space Admin' is displayed only if you are a space administrator for that space or you are a Confluence system administrator.

2. Click 'Themes' in the left-hand panel under the heading 'Look and Feel'. This will bring up a new screen showing all available themes. See screenshot below.
3. Click a radio button to select a theme.
4. Click 'Confirm'.
