

Creating a New Panel

Creating a New Panel

To create a panel page, navigate to the **Conference Home page** (the main page of the conference wiki) and go to the **Add** button in the upper right corner of the page, then click **Page**.

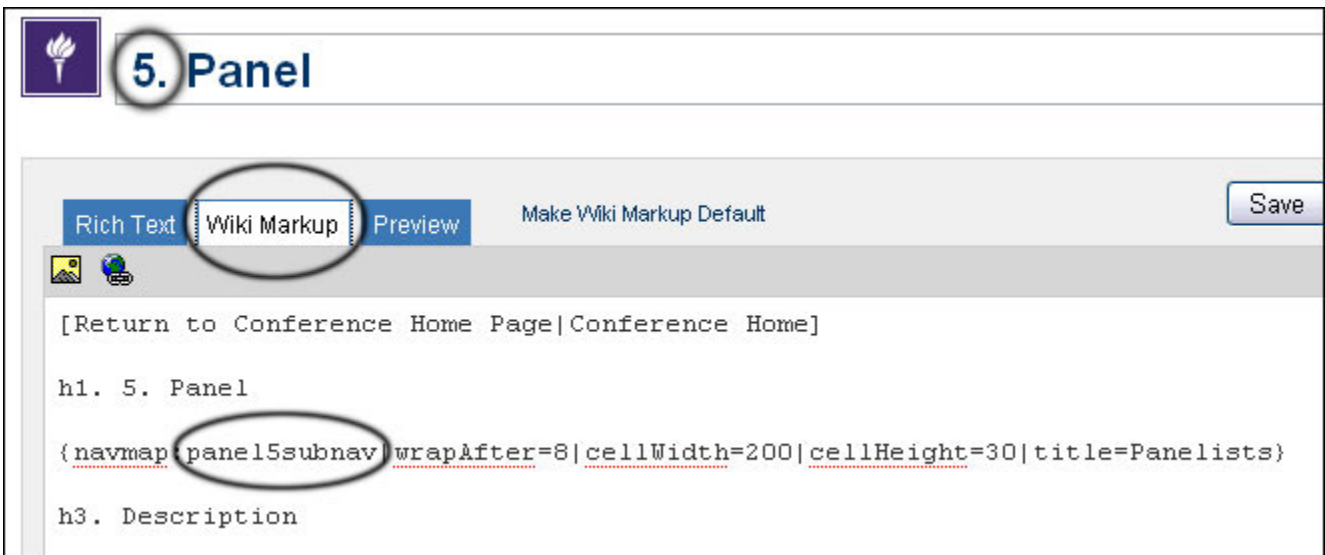

Click on **Select a page template** link at the top of the page.

From the list given, choose **Panel Template**.

To start editing the page, choose the **Wiki Markup** tab. In the markup change the panel number from **panel1subnav** to the correct panel number. For example, if this is the 5th panel, the change would be "panel5subnav".

Change the **page title** at the top of the page to a unique name. Start each name with a number, or a letter to set the sequence of the panels in the navigation.

Finally, add 2 **labels** at the bottom of the page: **mainnav**, **panel**. The mainnav label adds the page to the panel navigation on the Conference Home page.

ALL LABELS THAT CONTAIN THE WORD 'NAV' SHOULD BE PREFIXED WITH THE WIKI CONFERENCE CODE. SEE EXISTING PAGES FOR EXAMPLES. (ex: an_mainnav for the Arabian Nights Navigation)

Adding Text to the Page

For future edits we recommend the **Rich Text** mode.
