Enabling Rich Text Editing

You can choose to use Confluence's Rich Text Editor to create and edit page content.

Rich Text Editor can be enabled or disabled at site level

The Rich Text Editor is enabled at site level by default, but your Confluence administrator may have disabled it. If disabled, please ask a Confluence administrator to turn on 'Rich Text Editing' in the 'General Configuration' section of the Confluence Administration Console.

You can choose to open your Confluence editor in 'Rich Text' or 'Wiki Markup' mode by default.

To choose the Rich Text or Wiki Markup editor as your default:

1. Go to the 'Edit Page' option. To do this:
   - Go to a page in the space, and select the 'Edit' button. The page will open for editing.
   - This will open the page in your current default mode.

2. Click the 'Rich Text' tab to open the Rich Text Editor, or 'Wiki Markup' to open the Wiki Markup editor.

3. If you have chosen an edit mode that is not already your default, the link 'Make <EDITOR MODE> Default' will appear next to the tabs. Click the link to make the chosen editor your default.
   - Next time you open the editor, it will open in the selected mode.
